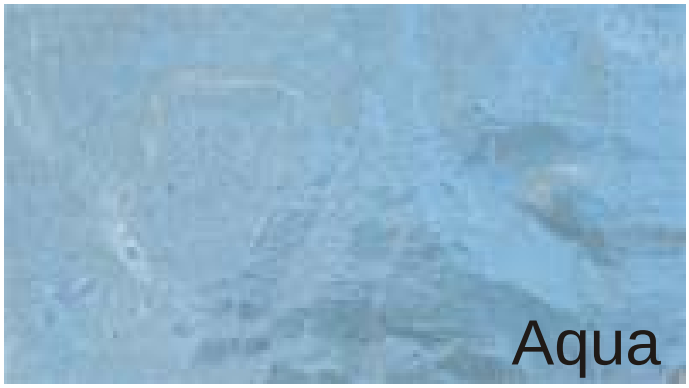
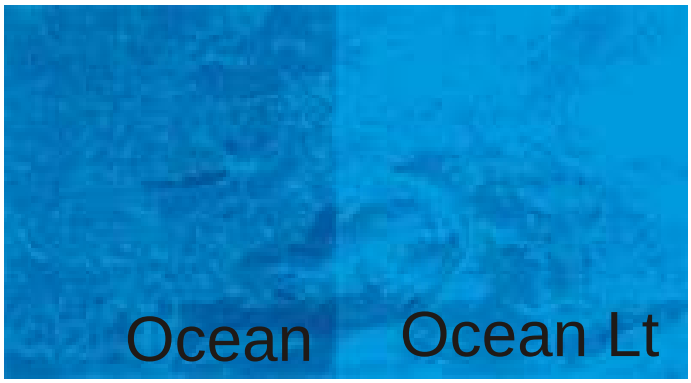
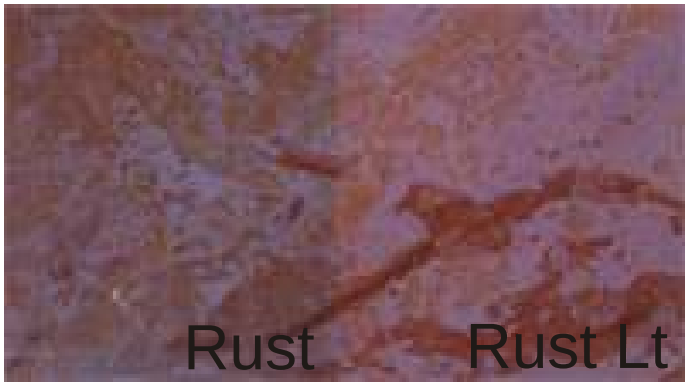
# Green Tint KLASS Metallics

A tested and selected range of automotive metallic colours applied to either Green Tint or Clear KLASS has enabled us to present a vibrant colour range of design options extending from our 15 individual KLASS textures.

The selected metallic paints enable us to produce four separate colours from the same tin.






The obvious difference is created by applying the metallic paint to green tint KLASS compared to clear KLASS. Our formulated green tint produces a different shade and tone to the painted textures. Additional colour options are achieved with the same paints by applying subtle changes in our manufacture, spraying procedures.
