

### Can I cut or drill KLASS sheet on Site?

#### Yes!

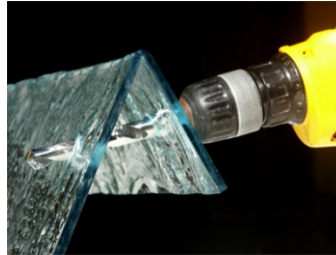

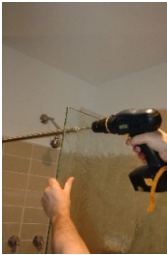

KLASS is virtually like any building material, you can compare its 'workability' to timber or MDF sheets.

Holes or installation points can easily be drilled on site.

We recommend that a used drill bit (wood) be utilised, if only a new drill bit is available, drill slowly to prevent the drill 'catching' on the material.

After cutting with a suitable saw, (circular, jigsaw, router) you can sand with regular open cut or wet and dry sand papers preferably with a medium then with fine. To finish to a high sheen you can either hand rub with a medium polish like "Brasso" or No.2 cut car polish.

We offer cut to size, drilling and edge polishing services.
