

### How would you compare KLASS with Glass?

KLASS is the choice above comparable glass products due to its ease of handling, light weight, competitive price and quick delivery time.

Unlike glass, it can easily be drilled, cut and polished either in your workshop or on site.

KLASS is a high quality textured acrylic that incorporates all the creative and aesthetic advantages of glass without, more importantly, the high costs of transport, handling and installation.

Installing KLASS suspended from stainless steel cables, drilling onto a frame or fixing to a wall is a breeze.

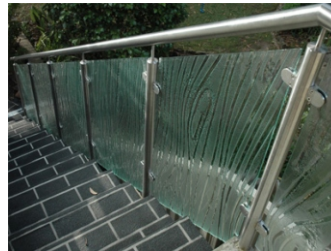

Cold formed curves are easy to produce on site, impossible to do with glass!

Architectural fixings can be used on almost any surface including masonry, block work, marble, granite and plaster walls.

Alternatively a suspended tension pin fixing can be used with stainless steel tension wire.

KLASS, being lightweight, can be suspended or cantilevered with little or NO support.

Holes or installation points can be drilled on site. Just like you would with wood
